Traceability of surgical tools

Hospitals and medical environments look for traceability solutions to manage a large amounts of tools. Laser-marked datamatrix codes can solve this issue, but the marks must have minimum impact on the metal surface. Ulyxe can easily fit into small marking stations, and is able to achieve high-contrast surface marking, with the so-called laser annealing technique.

ULYXE

LENS: 160 mm

MARKING TIME: 7 s

MATERIAL: Stainless Steel
